SUMMARY

Data scientist with over 5 years in machine learning and AI, spanning an MS in Analytics from the University of Chicago and 4+ years at iMerit, an AI training-data company. Designed and optimized evaluation and annotation workflows across text, audio, image and video/sensor data. Focused on bridging the automation gap through robust data governance to make evaluations scalable. Wrote the annotation guidelines and rubrics behind human review, including for LLM chatbot responses. Built the data pipelines and dashboards that turn evaluation results into ship and pricing decisions for executives.

PROFESSIONAL EXPERIENCE

iMerit **Apr 2022 – Aug 2026**

Data Scientist, Autonomous Vehicles | Feb 2026 – Aug 2026

- Architected near real-time ETL pipelines (Amazon S3 to BigQuery) feeding Looker Studio dashboards for sensor and video annotation projects.
- Automated quality and throughput reporting for team leads, cutting processing time 89%.
- Led statistics workshops (probability distributions, confidence intervals) for delivery leadership to target high-impact optimizations.

Data Scientist, RevOps | Jul 2025 – Feb 2026

- Reported directly to the company president, owning revenue data quality and pipeline analytics.
- Cleaned Salesforce data with Python, resolving 16,000+ flawed records and cutting data gaps 60%.

Data Scientist, Medical Pod | Nov 2024 – Jul 2025

- Became iMerit's first and sole data scientist, starting in medical and later expanding to RevOps and AV.
- Projected revenue for executives; found client trends to target new business and close deals.
- Linked audio length to time per task in an annotation pilot, cutting annotation time by over half and simplifying pricing; the pilot became a recurring project.

Solutions Architect | Apr 2022 – Nov 2024

- Designed human evaluation workflows across 15+ client projects spanning LLM chatbot responses, computer vision, audio and medical data, and wrote the rubrics and annotation guidelines behind them.
- Flagged NSFW content risk in a scraped-image dataset and set up client-side pre-screening before annotation, keeping sensitive content out of the labeling workflow to protect annotators.
- Selected and deployed annotation platforms (Ango, V7, Dataloop) for each client's needs and budget.
- Partnered with Delivery after launch to monitor live production, iteratively refining tooling, guidelines and workflows to meet quality and throughput targets.

Inference Analytics **May 2021 – Sep 2021**

Data Science Intern

- Processed and cleaned medical imaging data for TensorFlow CNN models.
- Built Tableau dashboards to monitor patient follow-up schedules, reducing hospital administrative lag.

Jet International | Account Manager **Dec 2017 – Sep 2020**

EDUCATION

The University of Chicago | MS in Analytics (program renamed MS in Applied Data Science) **Mar 2022**

Coursework: Machine Learning and Predictive Analytics, Natural Language Processing, Data Engineering Platforms, Time Series Analysis, Linear and Nonlinear Models.

Oregon Institute of Technology | BS in Operations Management, Minor in Statistics **Jun 2017**

Coursework: Design of Experiments, Applied Statistics I and II, Research Methods.
Certification: Lean Six Sigma Green Belt.

TECHNICAL SKILLS

Evaluation: Human-in-the-loop annotation, LLM response evaluation, rubric and guideline design, inter-annotator agreement, annotation platforms (Ango, V7, Dataloop)

Languages and ML: Python (pandas, Jupyter), SQL, R, PyTorch, TensorFlow, Claude Code

Visualization: seaborn, Plotly, Looker Studio, Tableau

Data Engineering: ETL pipelines, BigQuery, Amazon S3
